We deliver on time ... EVERYTIME

We are an Australian locally owned family business

Comet Gas Equipment Accessories

Introduction

CIGWELD Professional: when welding is your business

At CIGWELD we distinguish ourselves from our competition through superior featured, dependable products, technical innovation and excellence in customer service and technical support.

Our COMET Gas Equipment Accessories range is proof of this commitment to deliver quality equipment that exceeds expectations. A wealth of features and options make this equipment the perfect choice for the serious welding professional.

CIGWELD COMET Gas Equipment Accessories

COMET Gas Equipment offers a full range of accessories to tackle any gas cutting, welding or heating job. This diverse range includes hoses, flashback arrestors, thermic lancing equipment, manifold systems, Turbo Torch, Arcair Slice, and cutting machines, as well as a variety of spare parts.

These accessories are designed and manufactured to exacting tolerances to ensure precise compatibility and lasting performance, and comply with relevant clauses of the Australian Standards.

So don't compromise!

Insist on COMET to get the job done right . . . every time!

Warranty: This equipment is manufactured to stringent CIGWELD quality standards and is backed by a conditional warranty period as indicated.

Flashback Arrestor: Marked flashback arrestors conform to AS4603

Australian Standards: Relevant Australian Standards apply to selected items. Eg. Gas welding hose, Flashback arrestors, Welding goggles, etc.

Quality System: This equipment is manufactured to CIGWELD's Certified Quality System.

Gas Type: This equipment is designed for use with oxygen & acetylene.

Gas Type: This equipment is designed for use with oxygen & LP gas.

Suitable for heating: This equipment is designed for heating.

Suitable for welding: This equipment is designed for welding/brazing.

Suitable for cutting: This equipment is designed for cutting.

Fitted Hose

Features

- All COMET hoses undergo stringent quality checks, ensuring quality and compatibility with relevant COMET hose fittings.
- Colour coding of hoses and different threads for fuel and oxygen prevents incorrect connections of hoses to the wrong gas type.
- COMET factory fitted hose assemblies are available in twin hose configurations. This helps keep the work area tidy and reduces the risk of damage.
- Secure, specifically designed hose fittings ensure operator safety

Hose -The essential link

It is important to use the correct type of hose for the required gas(es) to be used. Any non-standard application should always be checked by and approved before being put into operation.

Pressure drops will occur through hoses and hose fittings, therefore allowances must be made to compensate for this when setting up equipment and adjusting regulators.

10 mm bore hose should be used for large flow applications and where long lengths of hose are to be used.

Colour coding of hoses and different threads for fuel and Oxygen prevents incorrect connections of hoses to the wrong gas type. CIGWELD twin hoses help to keep the work area tidy, which reduces the risk of hose damage.

Spare Parts

CRIMPING TOOL

For 5mm and 10mm ferrules Part No: 308647

Specifications

Oxygen and Acetylene hoses conform to Australian Standards AS1335-1995

Colour coding

Gas	Colour
Oxygen	Blue
Acetylene	Red
LP Gas	Orange

CIGWELD hose can be purchased either as a complete assembly with fittings or in single length plus appropriate fittings

Technical Tip

HOSE – Handling and Care

Long lengths of hose are not desirable. They tend to kink, are vulnerable to mistreatment. When long lengths must be used, be sure all connections are tight and ensure hose is protected from being stepped on, run over, kinked or tangled. Never use wire or insulation tape to fasten hose to connections nor to couple lengths of hose. Use only CIGWELD hose connections and couplings. Protect hose from sparks, hot slag, hot edges or open flames. Keep hose away from grease and oil. All new hose should be blown out before connecting welding equipment to remove talc, dust or water. Do not crimp hose to stop flow of gases temporarily when, for example, changing blowpipe. Red hose should always be used for fuel gas – blue hose for oxygen. Use only hose designed specially for oxygen and fuel gases. Hose specially manufactured for the purpose should only be used in cases where it may come into contact with liquid LP gas, such as when used with cylinders fitted with eductor tubes. Purge each length of hose before lighting the blowpipe. In other words, when hose is to be reconnected, treat it as you would new hose; before lighting up, pass through it some of the gas with which it is to be used.

Examine all hose periodically for leaks, worn parts, and loose connections. Test for leaks by immersing the hose in water. Carry out this test at normal working pressures. Should leaks or worn parts be found, at once cut out the section containing them. Remake joints with CIGWELD hose couplings.

The procedure to be adopted when re-fitting a connection to rubber hose:

- Slide connection taper sleeve over rubber hose.
- Attach nut and nipple to a blowpipe inlet connection.
- Hold the taper sleeve on the hose firmly with one hand and screw the blowpipe, with nut and nipple attached, into the sleeve and hose.

Never use a steel or copper pipe to make a temporary or permanent joint. Do not try to repair hose with tape.

If hose is burned in a flashback, discard that length of hose. Flashbacks may burn inner walls, making hose unsafe or cause further instability to the blowpipe equipment by blockage.

COMET Flashback Arrestors

Model F1 (regulator mounted)

Part No.	Model	Gas type	Connections	Connection to	Pressure rating	Max airflow l/min
308799	F1 Super	Oxygen	5/8"-18 UNF RH	Regulator outlet	1000 kPa	1122
308800	F1 Super	Fuel	5/8"-18 UNF LH	Regulator outlet	500 kPa (150 kPa Acetylene)	557 170

Ordering Information

OXYGEN

Flashback Arrestor – Model F1 Super
(Regulator Mounted) Part No. 308799

FUEL

Flashback Arrestor – Model F1 Super
(Regulator Mounted) Part No. 308800

Designed for connection to the outlet of regulators, with the following features:

- Pressure actuated cut-off valve to prevent further gas flow after a flashback occurs. Operation is indicated by a signal level. After resetting the lever it is ready for immediate re-use.
- Non-return valve.
- Large surface stainless steel conical flame arrestor.
- Pressure relief valve to vent excessive pressure.
- Temperature activated shut-off valve.
- Supplied with inlet filter.
- Complies to AS4603.
- Conforms to EN730/DIN 8521, UL, ISO 5175 class I (fittings to AS4267-1995).
- Tested by BAM.

Model F2R (regulator mounted)

Part No.	Model	Gas type	Connections	Connection to	Pressure rating	Max airflow l/min
308734	F2R	Oxygen	5/8"-18 UNF RH	Regulator outlet	1000 kPa	1133
308735	F2R	Fuel	5/8"-18 UNF LH	Regulator outlet	500 kPa (150 kPa Acetylene)	533 187

Ordering Information

OXYGEN

Flashback Arrestor – Model F2R
(Regulator Mounted) Part No. 308734

FUEL

Flashback Arrestor – Model F2R
(Regulator Mounted) Part No. 308735

SET

1 x F2R Oxygen;
1 x F2R Fuel Part No. 308890

BULK

25 x F2R Oxygen Part No. 308734IND
25 x F2R Fuel Part No. 308735IND

Designed for connection to the outlet of regulators and pipelines, with the following features:

- Non-return valve.
- Large cylindrical stainless steel flame arrestor.
- Medium-flow capacity.
- Supplied with inlet filter.
- Temperature activated cut-off valve.
- Complies to AS4603.
- Conforms to EN730/DIN 8521, UL, ISO 5175 class I (fittings to AS4267-1995).
- Tested by BAM.

NB: the thermal cut-off sealing element is not in the gas stream and is shrouded from flashbacks. The cut-off valve closes in the direction of flow assisted by a strong spring at an internal temperature of approximately 90°C. Operation is not indicated and the cut-off valve is not resettable by the user.

COMET Flashback Arrestors

Model F2B (blowpipe mounted)

Part No.	Model	Gas type	Connections	Connection to	Pressure rating	Max airflow l/min
308854	F2B	Oxygen	5/8"-18 UNF RH	Blowpipe inlet	1000 kPa	1250
308853	F2B	Fuel	5/8"-18 UNF LH	Blowpipe inlet	500 kPa (150 kPa Acetylene)	693 220

Designed for connection to the inlet of blowpipes where medium flow is required (handheld and machine), incorporating the following features:

- Non-return valve.
- Large cylindrical stainless steel flame arrestor.
- Medium flow capacity.
- Complies to AS4603.
- Conforms to EN730/DIN 8521, UL, ISO 5175 class I (fittings to AS4267-1995).
- Tested by BAM.

308367	F2BQ	Oxygen	5/8"-18 UNF RH	Blowpipe inlet	2000 kPa

Designed for connection to the inlet of blowpipes OR the outlets of regulators, with the following features:

- Quick disconnect for equipment storage
- Allows for quick connection and safe interchange of equipment
- Integral shutoff valve ensures gas tight seal when disconnected
- Unique barb design prevents improper gas connection
- Spare barbs available.
- Complies to AS4603.

85-10P

85-10B

85-10R

85-10R-LP

Designed for high-flow applications: Blowpipe mounting (85-10B), Regulator mounting (85-10R) and Pipeline installations (85-10P). They incorporate the following features:

- Non-return valve.
- Large cylindrical stainless steel flame arrestor.
- High-flow capacity.
- Temperature activated cut-off valve.
- 85-10R and 85-10P supplied with inlet filter.
- 85-10B has offset connections to accommodate their size onto the blowpipe.
- 85-10R takes full advantage of the CIGWELD high-flow regulators (TR92 Oxygen, TR93 Acetylene) with their 5/8" BSP high flow outlet connection.
- 85-10R is suitable for use with COMET regulators fitted with the standard welding hose connection 5/8"-UNF.
- Conforms to EN730, ISO 5175 class I.
- Tested by BAM.

NB: the thermal cut-off sealing element is not in the gas stream and is shrouded from flashbacks. The cut-off valve closes in the direction of flow assisted by a strong spring at an internal temperature of approximately 90°C. Operation is not indicated and the cut-off valve is not resettable by the user.

Key to the chart

Flashback arrestor model, placement, hose length, hose diameter, regulator outlet pressure and application inlet pressure are interrelated. For full protection it is essential all components have adequate flow capacity when used as an inter-connected system. Operation outside the recommendations eg. smaller hose diameter, longer length of hose, no flashback arrestor or smaller than indicated flashback arrestor could lead to flame instability and tip starvation. This increases the likelihood of a flashback.

Combinations in the table above fall under two different categories:

White Box – Full protection is provided with both regulator mounted and blowpipe mounted flashback arrestors providing sufficient inlet pressure for the application to have optimum flow and flame stability. This should be selected wherever possible.

Blue Box – Only blowpipe mounted flashback arrestors can be fitted to allow sufficient inlet pressure for the application. These combinations should be used only when those highlighted white are not practical or possible. Note the level of protection will not be optimal.

The maximum recommended safe length of hose is 30M. Greater lengths than this are not recommended due to pressure drop and the operator being too far from the cylinders. This table is for hand held blowpipe applications only, not for machine cutting applications. For more detailed information consult the flow charts of the relevant flashback arrestors.

Accessories

Radius Bar & Pivot

To be used in conjunction with Roller Guide (308729). The Radius Bar, when fitted to the Roller Guide, enables circles of up to 960mm diameter to be cut.

Ordering Information

Radius Bar & Pivot Part No. 308752

Roller Guide

Suits COMET 3, VECTOR™, COLT™, SABRE, Spectra, Multi-purpose and Firefox blowpipes. Roller guide attaches to cutting nozzle and permits easy cutting of straight lines. The unit is fully adjustable, allowing it to be raised or lowered, or tilted for angle cutting.

Ordering Information

Roller Guide Part No. 308729

Combination Roller & Rotating Circle Guide

The COMET combination roller guide and rotating circle guide can be fitted to COMET torches to allow accurate control whilst cutting straight lines and circles.

- Fits COMET torches, type 41/44 tips
- Rotating head design allows full 360° cutting from one position – no need to move!
- Cuts accurate holes from 70mm (2¾") diameter up to 710mm (28") with radius bar provided
- Wheel hubs fitted with non-jamming guards
- Non-rusting stainless steel axle & guards
- Constant tip height – increases cut quality & speed
- Improves nozzle life

Ordering Information

Combination Roller & Rotating Circle Guide Part No. 308354

Accessories

Gas Economiser (Acetylene)

Ordering Information

Gas Economiser
Acetylene Part No. 308503

Allows the operator to extinguish and relight the blowpipe simply and quickly without having to touch the regulator or blowpipe valve settings. Flame will always relight to original settings. Operates with Acetylene. Factory adjusted to 'shut-off' fuel gas prior to Oxygen to prevent flame from 'snapping' when extinguished.

Unique spring adjustment means positive shut-off even with very light or heavy blowpipes.

Solid brass construction with holes for bench mounting provided. Pilot burns with a clean smokeless flame. Ideally suited for applications where constant relighting is required in such locations as technical schools, light production lines, workshops, test benches, etc.

CIGWELD Gas Welding & Cutting Hints Handbook

Ordering Information

CIGWELD Gas Welding &
Cutting Hints Handbook Part No. 312943

Everything you need to know about COMET equipment including safety, set up, lighting procedures, closing down procedures, welding and cutting procedures, equipment and charts.

Flint Lighter

Ordering Information

Flint Lighter Part No. 308789

Metal Cup Type with replaceable flint. Ensures quick, easy lighting up.

Accessories

Flints (pack of 10)

Suits flint lighter (308789).

Ordering Information

Flints (pack of 10) Part No. 308790

Three Flint Lighter

Rigid arm design concentrates more force onto the flint. End cup pockets the gas for quicker lighting. Spare flints dialled into position via adjusting nut. Flint centred on abrasion cylinder for even wear. Simple ergonomic design.

Ordering Information

Three Flint Lighter Part No. 308832

Flints (pack of 5)

Suits Three Flint Lighter (308832).

Ordering Information

Suits Three Flint Lighter Part No. 308833

Electronic Lighter

This rugged, all steel construction piece, electronic lighter is guaranteed to work every time and is easy to hold and use. Suitable for use with all Air/Fuel and Oxy/Fuel equipment. Continuous sparking when lever depressed.

Ordering Information

Electronic Lighter Part No. 308700

Accessories

Combination Spanner

Accommodates four nut sizes and is designed to be used for regulator cylinder valve nuts, hose connections, Type 40 nozzle nut and Roller Guide adjusting bolts.

Ordering Information

Combination Spanner Part No. 309258

Cylinder Key

For use with all CIGWELD cylinder valves (not Handwheel operated types).

Ordering Information

Cylinder Key Part No. 309275

Tip Cleaner Wire Set - LP Gas/Natural Gas Nozzles

Suitable for tips, nozzles and Hi-Speed nozzles. Removes carbon or loose slag without damaging gas parts. Also contains a wire brush for cleaning slots in Type 44 nozzles.

Ordering Information

Tip Cleaner Wire Set Part No. 308013

Tip Cleaner Set - Acetylene Nozzles

Contains eleven wires and a file in a metal case. Suitable for Type 41 Acetylene nozzles and tips.

Ordering Information

Tip Cleaner Set Part No. 308036

Accessories

Pressure Gauges

COMET gauges go far beyond the normal requirements of standard industry gauges. Precision made in Germany to conform to AS 1349 they include features such as colour coded information, solid baffle bulkhead protection between the gauge face and working components to protect the operator, wider scales to set pressure accurately, fail-safe construction – no parts are thrown in the event of over-pressurisation.

Thermic Lancing

Fast, quiet and versatile, CIGWELD thermic lancing is the most advanced method of slicing through hard-to-clear materials, particularly reinforced concrete. Ideal for demolition work, it takes only a fraction of time required by other methods. Economical, portable and extremely easy to operate, the CIGWELD thermic lance is the ultimate general purpose tool for all concrete.

Ordering Information

Part No.	Description
335072	Thermic lance holder (including valve) 5/8"-18 UNF RH connection
301637	COMET 700 oxygen regulator (1,000 kPa model only)
7904506	COMET 10mm blue oxygen hose (available from Thermadyne distributors by the metre)
308859	Flashback arrestor – Model 85-10R
308691	COMET 10mm crimped hose fitting (2 required)

Consumable Thermic Lances

Part No.	Description
335074	16mm OD Thermic lance x 2.7m
335073	19mm OD Thermic lance x 2.7m

Spare Parts

Part No.	Description
304321	Kit containing 16mm thrust washer, lance holder bush, circlip and rubber collet
304322	Kit containing 19mm thrust washer, lance holder bush, circlip and rubber collet

The CIGWELD thermic lance makes short work of tough materials. Silent, simple, fully portable, assured results on:

- Reinforced concrete
- Mass concrete
- Granite
- Quartzite
- Fused alumina
- Sandstone
- Copper slag
- Firebrick mixture
- Glass
- Brick (coreheart)
- Railway bogies
- Ship propellers
- Steel piles and foundations
- Piercing concrete

The Process

Thermic lancing is essentially oxygen cutting with a steel tube packed with steel rods. Oxygen passed through the tube reacts with the iron in the rods, so that when the lance is ignited it becomes a source of intense heat and forms a fluid slag that flows out of the cavity. The lance is slowly consumed as work progresses. Pre-heating the tip with a COMET 3 gas-welding blowpipe ignites the lance.

Quiet

No noise. No shudder. No fuss. Unlike noisy pneumatic hammers, drills and electric tools, thermic lancing is quiet and vibration-free. As a result, it can be used close to noise sensitive areas such as libraries, hospitals, law courts, etc.

Easy to own, easy to run

The CIGWELD thermic lancing package has been designed for use in conjunction with standard oxy-acetylene equipment. The lancing handle is made of standard pipefittings (5/8"-18 UNF RH). A basic understanding of oxygen cutting is all that is required. Operating costs vary depending on the application, lance consumed would be approximately ten times the depth of the hole pierced.

You can take it anywhere

Not dependent on electric power, it's at home anywhere – factory or site. The only equipment required is a standard COMET 3 gas set for preheating and cylinder or crate oxygen supply.

The performance never varies

CIGWELD thermic lances are designed and produced to precise standards which effectively optimises lance consumption and oxygen usage. This assures you of guaranteed control of all operating factors, including labour and material costs.

Equipment required

Equipment required consists of a thermic lance holder fitted with a gas control valve into which the lance is fitted, cylinders of oxygen, a gas regulator and a length of hose. The operator should wear full protective clothing.

				COMET 750 - 310356		
Helium	MC5	MC1	MC9	COMET 700 - 301800		

Applications

Examples of where temporary manifolds are used are for flame cleaning of large structures, prolonged heating or lancing operations. The heavy Oxygen and fuel demands of these jobs can be met by manifolded two or more cylinders together according to flow rate required and duration of the job.

Features

Temporary manifolds are ideal for "on-site" jobs where an uninterrupted supply of gas is required in excess of that provided by one cylinder. They are highly portable and may be extended to include any number of cylinders where a large capacity is necessary. By manifolded two or more cylinders together, high draw-off rate can be obtained without interruptions.

By using CIGWELD gas manifolds you gain: reduced cylinder handling, gas savings, lower cylinder rental, more floor space, fewer equipment repairs and simplified stock control.

Manual Change-Over Manifolds

Modular Components

Ordering Information

Thermadyne now makes it easier to order manifolds. Instead of ordering parts separately, simply choose from the complete kits table below.

	Oxygen	Oxygen High Flow	Argon	Carbon Dioxide	Acetylene	Hydrogen	Nitrogen	1x1	2x2	3x3	4x4
Manifold Kit (VI)	360195	360196	360140	360141	360139	360142	366131	1 Off	1 Off	1 Off	1 Off

Manifold Kit comprises of:

- 1 x Manifold
- 1 x Regulator
- 1 x High pressure leads
- 1 x Flashback arrestor (where applicable)
- 1 x Connection kit

Extension Kit comprises of:

- 2 x Straight extensions
- 2 x High pressure leads

Pipeline connection kit – regulator to pipeline:

These kits allow you to connect to a regulator controlling pressure from a manifold to a pipeline. A pipeline flashback arrestor can also be added at this connection point if required. (see page XX for more flashback arrestor details)

Part No.	Description	Part No.	Description
360193	Kit for oxygen and inert gases	360192	Kit for fuel gases

	5/8" BSP nut RH		5/8" BSP nut LH
	1/2" brass nipple to braze to pipeline		1/2" steel nipple to braze to pipeline
	O-ring for nipple		O-ring for nipple

Manifold Systems

Manifold Accessories

Manifold Valves

High Pressure

Manifold Valves have inlet connections to suit standard high pressure flexible gas leads and they are intended to be used as a single fixed point manifold with supply from a cylinder via a flexible lead.

Point Valves are intended for use as outlets on low or medium pressure pipeline systems not exceeding 2100 kPa and they have inlet fittings suitable for permanent pipeline connection.

Low pressure point valves may require wall mounting bracket part number 360232.

366121	Air 20,000 kPa @ 15°C	Type 60	1800	3/8" BSP RH INT.

SMART-HOSE™ High Pressure Flexible Leads are specifically designed for most common gas types. All hose components are carefully selected for gas compatibility. Each hose has a minimum burst pressure of Four times the nominated working pressure. The maximum working pressure and working gas(es) are clearly identified on a tag secured to each hose. Hose bore ID is 1/4".

A High Pressure Hose with More!

SMART-HOSE™ is a proven hose safety system to defeat the hazardous effect of rupture or failing during transfer of a pressurised gas.

SMART-HOSE™ hoses are made as standard with Teflon® and have an outer cover of stainless steel braiding. Conventional hoses, through fatigue, defects or abuse, may result in failure. These failures may cause violent "whipping" of the hose as gas is discharged at a

high velocity. The discharge of a flammable, toxic or oxidising gas adds an additional hazard.

SMART-HOSE™ eliminates the potential for these hazards by incorporating a patented design that includes an internal cable connected to normally open "check valves" on each end. If the hose should separate or be stretched, the unique design instantaneously and safely stops the flow in either direction.

SMART-HOSE™ has passed rigorous testing by major gas producers and, with thousands in service, is a proven design.

SMART-HOSE™ High Pressure Flexible Leads are designed for attachment between compressed gas cylinders and CIGWELD manifolds. They can also be attached directly to high pressure point valves when single cylinder or cylinder pack installation is required.

COMET Flowmate

Set flow restrictors for MIG & TIG

Features

- Pre-set: no adjustment to flow possible.
- Inexpensive.
- Ideal for workshop use.

Here's a solution to an age-old problem – MIG and TIG operators adjusting flowmeters continually which can lead to wasted gas situations. Eliminate this with a COMET FLOWMATE.

The COMET FLOWMATE is a set flow restrictor that takes the place of an adjustable flowmeter. The FLOWMATE is carefully designed to give exacting flows of 15 lpm for MIG welding and 8 lpm for TIG welding. Simply screw a FLOWMATE onto the outlet of the existing regulator then attach the gas hose to the FLOWMATE. (FLOWMATE is designed to operate at 200 kPa outlet pressure so make sure the regulator reads this on the gas delivery gauge. If the regulator is a pre-set model the set outlet pressure should be detailed on the regulator. (COMET 500 pre-set regulators for MIG and TIG use are set to 200 kPa). FLOWMATE is ideal for workshops and where gas pipeline reticulation systems are in use.

Ordering Information

Extreme Self-Lighting Torch

TurboTorch Extreme® Hand Torches are designed to provide unprecedented durability, highest heat output and maximum fuel efficiency. The patented swirl combustion gives you the best burn in a self-lighting package. The flame tube swivels 180 degrees for easy positioning. The TurboTorch Extreme® Hand Torches use MAPP® or LPG without changing the orifice. Locking button and final flame adjusting valve give optimum performance.

- For direct connection to Turbogas® (MAPP) gas
- High impact ABS case for additional strength
- Replaceable tip end
- Easy to clean orifice
- Heavy-duty piezo ignition with locking facility
- Machined rotor swirls flame
- CGA-600 connection
- 2 year conditional manufacturer's warranty

338536	Platemate™ 2 includes acetylene nozzle size 1, tip cleaners and spanners

Parts & Accessories

Part No.	Description
3 Seat cutting nozzles - standard speed Acetylene	
306114	Tip size 00, 0-5mm plate thickness
306115	Tip size 0, 5-10mm plate thickness
306116	Tip size 1, 10-15mm plate thickness
306117	Tip size 2, 15-30mm plate thickness
306118	Tip size 3, 30-40mm plate thickness
306119	Tip size 4, 40-50mm plate thickness
3 Seat cutting nozzles - standard speed LP gas	
306097	Tip size 0, 5-10mm plate thickness
306098	Tip size 1, 10-15mm plate thickness
306099	Tip size 2, 15-30mm plate thickness
306100	Tip size 3, 30-40mm plate thickness
306101	Tip size 4, 40-50mm plate thickness
335287	Rail 1.8m long
338358	Two torch set
338359	Circle cutting attachment
OKS5020	Nozzle nut

Two Torch Set

This set allows parallel and bevel cutting with spacing of 80mm-300mm.

Includes; 1 x cutting torch, 1 x torch adjustment bracket, 1 x extended racking bar, 1 x counterweight, 1 x gas distribution manifold, 1 x set of gas hoses.

Circle Cutting Attachments

This attachment allows cutting of circles from 30-2400mm.

Includes; 1 x circle cutting attachment, 1 x counterweight.

Additional Rail: Additional 1.8m rails may be added to achieve any desired cutting length.

Slice Cutting System

Arcair
Professional

Features

- Cuts through almost anything.
- No pre-heating required.
- Protective hand guard and spark arrestor built in.
- Up to 3 times faster than oxy fuel.
- Lightweight – complete SLICE plant only 14 kg.
- Comfortable and easy to use.
- Portable – comes with toolbox.

The ARCAIR Professional SLICE Cutting System is unlike any other cutting technology because of its ability to cut, burn or pierce virtually any metallic, non-metallic or composite material.

It will cut right through hard-to-cut materials such as mild, stainless and alloy steels, cast iron, aluminium, magnesium, other non-ferrous metals, slag and refractory materials. It can punch through concrete or brick, even if it's caked with rust, mud or other corrosion. You can cut through nearly anything with the SLICE System.

Perfect for use in the workshop or in the field. Applications include plant maintenance, building renovation or demolition, scrap clean-up and salvage work.

Ordering Information

Part No.	Description
OTW63/991036	SLICE Cutting System

SLICE Cutting system plant includes:

SLICE battery pack 240 VAC/50Hz; 7mm cutting rods (qty 25); Striker assembly; Torch assembly; Collet extension assembly; Extension shield; Oxygen hose (3m); Charging cable 240VAC/50Hz (3m); Coupling; Instruction manual; Tool box

NOTE: The SLICE torch comes standard with the 7mm Collet Chuck and Collet Nut. To utilise the 10mm rods the user must order the 10mm rod conversion kit which includes the 10mm Collet Chuck and Collet Nut.

Additional equipment required:

Part No. 301637 COMET 700 Oxygen regulator set at 550kPa Industrial grade Oxygen
